SINGLE MOTOR HANDSET

Raises backrest & lowers footrest from recline. Lifts chair to fully raised position

Lowers chair from fully raised position. Raises footrest & lowers backrest to recline

Leggett & Platt®

The Single Motor Lift Mechanism offers a simplified and user-friendly design, ideal for those who prefer straightforward functionality. It raises and lowers the backrest and footrest together in a smooth, continuous motion, while also lifting the chair to assist with standing. Unlike the twin motor system, which allows independent control of recline and footrest positions, the single motor operates both simultaneously. This all-in-one motion makes it an excellent choice for users seeking ease of use without the need for multiple adjustments.

FEATURES

LEGGETT & PLATT	Single Motor Lift mechanism
MECHANISMS	3-year warranty
ELECTRICAL PARTS	1-year warranty
WEIGHT LIMIT	Occupant weight 142kg
